

Committed to environmental responsibility

How Dalradian is caring for the local environment

We're a mineral exploration and development company and we've been working in County Tyrone since late 2009. Did you know that this area holds one of the most promising undeveloped gold deposits in the world? We've spent the last ten years exploring and researching how its potential might be unearthed in the most responsible, locally beneficial and thoughtful way.

In 2017 we submitted a planning application to build an underground mine – one committed to environmentally responsible practices that will bring economic benefit, employment and training to Tyrone. We've recently submitted a package of Further Environmental Information (FEI), including a number of enhancements in response to feedback from stakeholders. We've listened, and our project is better as a result.

For more information or to show your support for the project, please visit dalradian.com/environment

We've listened and made these improvements

100%
carbon neutral
from day one

so the operations will not contribute to climate change

No cyanide or smelting will be used

simplified processing to yield a partially-refined product

Protecting water – lowering demand by

30%

our water will be sourced and recycled on-site and treated before we release it

Environmentally friendly choices

using renewable power, electric vehicles, conveyor belts and biodiesel

Approximately

25%
decrease in fuel consumption

by using electric vehicles and conveyors
